☎ 778-960-3310 ✉ [joshua.peng.1111@gmail.com](mailto:joshua.peng.1111@gmail.com) 💼 [linkedin.com/in/joshuapeng1999](https://www.linkedin.com/in/joshuapeng1999) 🌐 [joshpeng1999.github.io](https://joshpeng1999.github.io)

## Technical Skills

---

**Languages:** Python, Java, C/C++, HTML, CSS, JavaScript, TypeScript, Rust, Kotlin, Linux Bash  
**Developer Tools:** Git, Docker, Ansible, Kafka, Celery Task Queues, Elasticsearch, Kubernetes, Android Studio  
**AI Tools:** ChatGPT, Claude, Gemini, Cursor, Copilot, OpenWebUI, Roo Code  
**Frameworks:** React, React Native, Node.js (Express), Django  
**Databases:** MySQL, PostgreSQL, MongoDB, Redis

## Work Experience

---

### Fortinet

July 2023 – Present

*Software Developer & DevOps*

- Led development for 2 projects: an antivirus generation system for zero-day (unknown) files and a large-scale antivirus testing system, enabling internal teams to efficiently create cyber defenses for **thousands** of users daily
- Replaced old monolithic cache with **Rust MMAPs**, removing 3-hour rebuilds and improving lookup speed by **50%**
- Built robust **Django (Python)** REST APIs to provide detailed statistics on antivirus systems, ensuring **100%** of newly received files for antivirus testing are always being downloaded
- Performed immediate QA and troubleshooting for critical enterprise systems by resolving issues across infrastructure components like **Kubernetes, Kafka, Elasticsearch, MySQL, Redis**, and **Linux** servers
- Automated the monitoring and deployments of important file scanners using **Python** cron jobs, **Docker**, and **Ansible** to mitigate user disruptions, potential system errors, and abnormal behavior escalation
- Leveraged self-hosted **GPT** via **OpenWebUI** to completely refactor and fix an incomplete legacy system's usability

### Salesforce (Traction on Demand)

May 2021 – December 2021

*Software Developer Intern*

(8-month term)

- Resolved business infrastructure issues of **4** different client companies by building custom Salesforce solutions
- Implemented user-friendly SFDC Lightning components by utilizing the Lightning Web Component (**LWC**) front-end framework and writing robust **Apex** back-end controllers/triggers for handling database queries
- Delivered requirements on time for deals valued over **\$1M** and provided consistent updates to clients through Jira

### AutoMetrics Manufacturing Technologies

September 2020 – December 2020

*Full-Stack Developer Intern*

(4-month term)

- Developed a **React**-based web application enabling remote real-time monitoring of industrial welding operations, leading to a **20%** improvement in production efficiency and quality for clients
- Configured back-end API endpoints in **Django (Python)** that performed **AI**-powered root cause analysis to accelerate troubleshooting welding abnormalities
- Connected **WebSockets** to seamlessly stream live videos and electrical data from cameras/sensors to the application

## Education

---

### Simon Fraser University

Graduated: April 2023

*Bachelor of Science in Computer Science*

- Relevant Courses: Data Structures/Algorithms Analysis, ML/AI, Distributed Systems, Database Management

## Projects

---

### Legal Contract Scanner | *React, TypeScript, Node.js, Claude*

- Built a legal contract parser leveraging the Gemini LLM to produce structured, easy-to-understand summaries

### Capsule Closet | *Java, Android Studio*

- Built a mobile outfit-tracker and closet app aimed to reduce the overconsumption of clothes and textile waste

### Stormhacks | *React, TypeScript*

- Built the Stormhacks website ([joshpeng1999.github.io/stormhacks](https://joshpeng1999.github.io/stormhacks)), an annual hackathon drawing participation from **300+** participants globally
